Civic Health and Socially Connected Communities

Anita Chandra

Vice President and Director
RAND Social and Economic Well-Being

Michael Stevenson

Co-Director
County Health Rankings & Roadmaps

What **forces** shape community **conditions**?

Civic health is the opportunity people have to participate in their community.

Civic infrastructure fuels participation.

2024 NATIONAL FINDINGS REPORT

Creating Thriving Communities Through Civic Participation

CIVIC HEALTH OPPORTUNITIES ARE NOT EQUAL

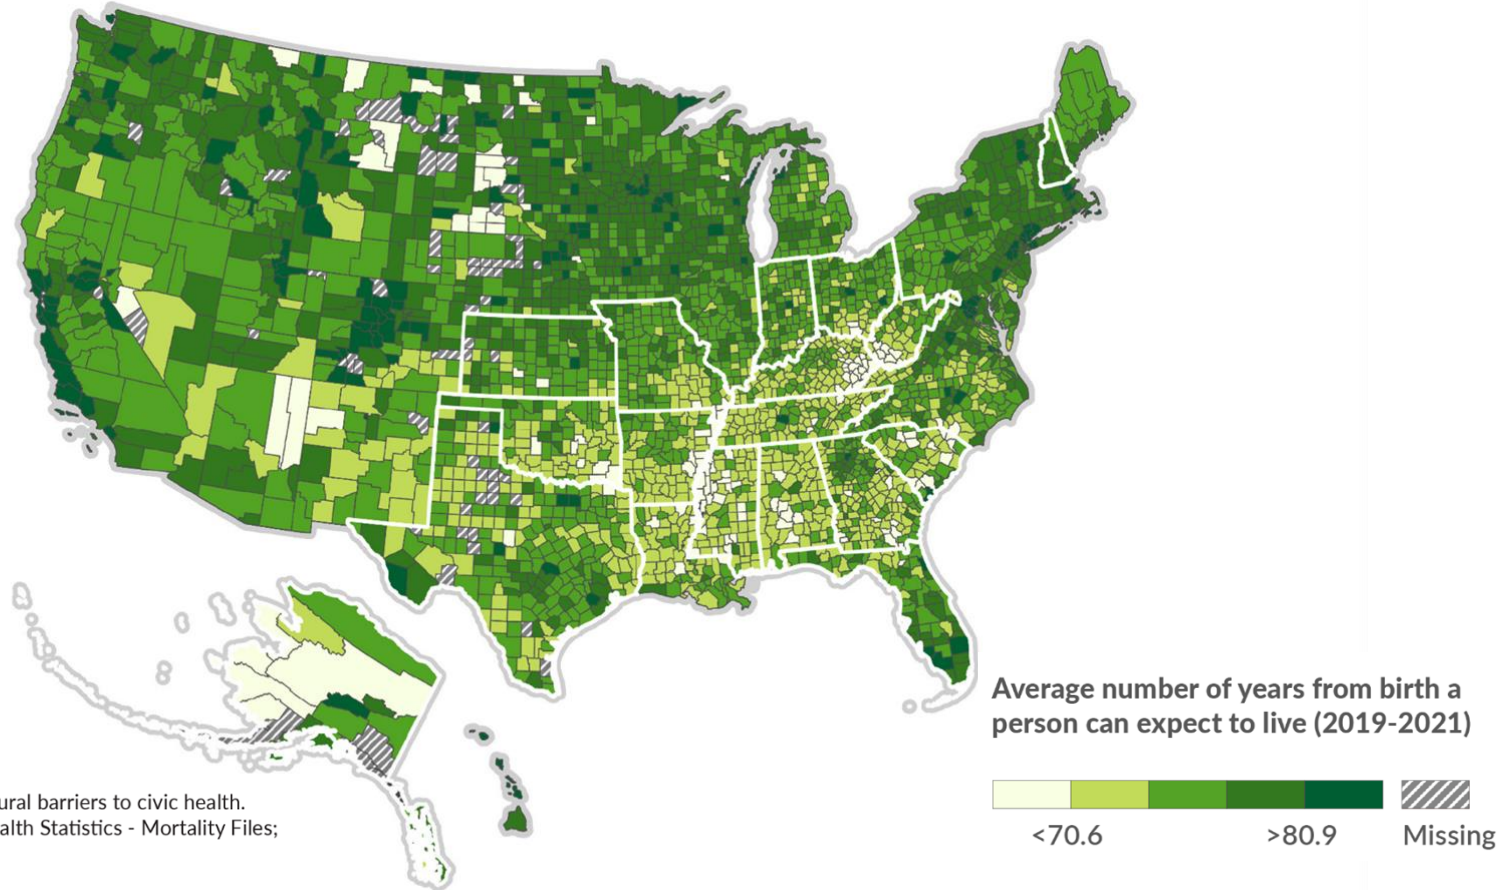

- ▶ The healthiest counties have well-resourced civic infrastructure, including access to local news, broadband and public libraries, compared to counties among the least healthy.
- ▶ Counties with well-resourced civic infrastructure also offer more social and economic opportunity for good health and have higher rates of participation, such as voter turnout or union membership.

Many laws and policies that underlie who has access to civic infrastructure have historical roots and are still contested today.

Life Expectancy Among States with More Structural Barriers to Civic Health

Highlighted states have more structural barriers to civic health.

DEFINING AND MEASURING CIVIC INFRASTRUCTURE

Social and Economic Well-Being

Building Safe, Healthy, and Thriving Communities

RAND SOCIAL AND ECONOMIC WELL-BEING helps decisionmakers find practical solutions to society's biggest and most complex policy challenges: fostering healthy and resilient populations and environments, strengthening the fairness and effectiveness of the civil and criminal justice systems, and ensuring that individuals and communities can address inequities and prosper.

WHAT'S THE CONNECTION?

Increases in physical and mental health and well-being are related to increases in civic engagement, such as voting or participation in volunteer activities

Some studies show that poor health in early life relate to lower civic engagement in later life

Social connection matters. Since poor health can be associated with social isolation, that social isolation can make civic participation difficult

THE RELATIONSHIP CAN VARY BY POPULATION AND HEALTH ISSUE

The relationship between voting and *health condition* has varied in studies.

Example study: Those with cancer more likely to vote, those with heart conditions less likely to vote. Is this related to organizing around diagnoses, stigma related to certain conditions, or else?

Example study: Challenges in access to health care related to challenges in access to voting.

Example study: Depressive symptoms associated with less voting.

The relationship between voting and *health behavior* also showing some linkage.

Example study: Those who smoke or drink less likely to vote.

The relationship between voting and *community health* also indicates some connection.

Example study: Communities with higher inequality in voter turnout related to higher percentage of people in community rating health as only fair or poor.

BEYOND VOTING...

Self-rated health positively associated with high trust in institutions, sense of belonging, and civic engagement.

In some studies, volunteering associated with lower health risks (e.g., lower blood glucose levels).

Some positive associations between environmental volunteering and self-rated health.

Fewer studies so far have examined the relationship between civic engagement and broader well-being.

CIVIC PARTICIPATION TRENDS

RAND has conducted a National Survey of Health Attitudes (NSHA), and related health mindset surveys during COVID, since 2015 (7 surveys in total so far).

Here is a snapshot of recent findings from the 2023 NSHA:

- More formal engagement
 - 18% reported volunteering with an organization working to improve the health and wellbeing of those in their community
 - 16% attended a civic meeting to address a community issue
 - Example differences by race/ethnicity: 20% Black/African American, 16% white, 15% Hispanic/Latino, 26% American Indian/Alaska Native, 15% Asian; 8% NHPI; 27% MENA
- Supporting others
 - 43% reported participating in a community-wide event
 - 46% reported helping a neighbor who was struggling

BUT PEOPLE SEE BARRIERS TO ENGAGEMENT

Just a snapshot of findings

- 46% see somewhat or mostly major barrier the issue of people not knowing where to start
- 45% do not think their involvement will make a difference in health and wellbeing in the community
- 36% feel they have offered suggestions in the past but has not gone anywhere

WE KNOW THAT STRENGTHENING CONNECTION AMONG INSTITUTIONS AND PEOPLE BUILDS COMMUNITY DISASTER RESILIENCE

In an emergency, strong communities
can be the key to survival.

Connect with your neighbors.  Be prepared to respond.

Wellbeing
IN SANTA MONICA

NEIGHBORHOOD RELATIONSHIPS

56% of Santa Monica residents feel they can count on their neighbors compared to 80% in a US/national survey.

BUILDING CIVIC ENGAGEMENT THROUGH WELLBEING MEASUREMENT AND ACTION

CITY OF SANTA MONICA

A SUSTAINABLE CITY OF WELLBEING

FY 2017-19 ADOPTED BIENNIAL BUDGET

NURTURING A COMPLETE AND LONG-TERM COMMUNITY DOWNTOWN

Downtown is now a bustling mixed-use neighborhood that supports a permanent residential population in addition to thousands of local Santa Monicaans, employees and visitors. Strong housing incentives seek to increase the number of residents Downtown, and supports their well-being through a comprehensive planning approach that integrates public space, mobility, historic preservation and arts and culture.

WELLBEING INDEX RESULTS FOR DOWNTOWN

Good	Greater Access to Stores + Services	Spend more Time Outdoors+Public	More Availability of Cultural Experiences
	Highest Use of Transit	Greater Access to Healthy Foods	More Vibrant Nightlife
	Concerns over Rent	Less Feeling of Community	Less Life/Work Balance
Needs Work	Concerns over Job Security	More Stress	Heat Soak/Less Often

New public spaces and places will emerge from an ill opportunities.

Powerful incentives for building preservation will retain historic fabric.

Street and public spaces will be enhanced with new activities.

A new model for mobility will promote more choices for moving around.

THE DOWNTOWN COMMUNITY PLAN

A City of Santa Monica Specific Plan

Maintaining character and vitality at the historic crossroads of community, culture and commerce.

What Works for Health

countyhealthrankings.org/whatworks

TAKING ACTION

- ▶ Public libraries
- ▶ Public deliberations
- ▶ Participatory budgeting
- ▶ Voter registration initiatives
- ▶ Voter turnout initiatives
- ▶ Youth civics education

PUBLIC LIBRARIES FOR COMMUNITY BUILDING

Public libraries can be safe spaces for people to gather for activities, programs, classes and more.

Public libraries are recommended by experts to increase community involvement and social capital.

Expert Opinion

Potential to
Decrease Disparities

PUBLIC DELIBERATIONS

Public deliberations are facilitated and informed conversations between community members.

Public deliberations can lead to reduced polarization and stronger issue knowledge for those who participate.

Some Evidence

Potential to
Decrease Disparities

Socially Connected Communities Network

Healthy Places by Design's Socially Connected Communities Network aims to inspire action that results in more socially connected and equitable communities by exploring ideas and strategies that reduce social isolation and strengthen social ties, especially for those who are most marginalized. The Network has four components designed for a variety of learning styles and to address the continuum of community-led change. Click on the icons below to learn more about the Network components. And sign-up to stay up-to-date and receive our Socially Connected Communities Network e-newsletter.
